

Residential Tank Heaters

The Rollie electric tank and draw tube heater is designed to heat number 2 heating oil in outdoor residential storage tanks.

Because the heater is in the draw tube it ensures that the warmest oil is always pumped out first.

Main Features:

◆ Prevents Gelling

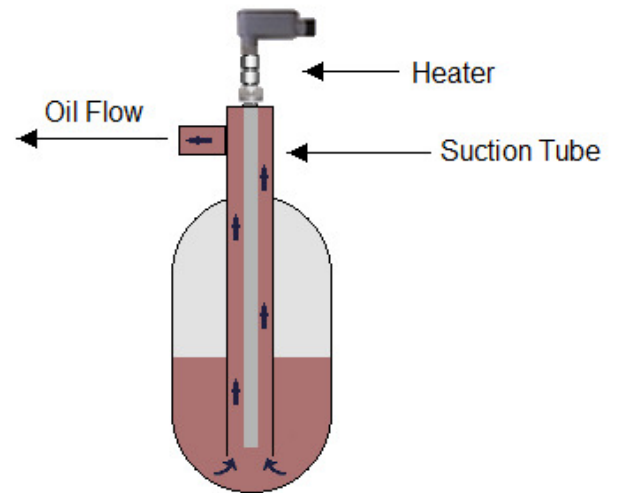

Heating oil can gel at temperatures as high as 10 degrees. The heater comes on automatically when the outside air temperature falls below 50 F.

◆ Installs in Minutes

The heater is installed in any available tank top opening. A pipe wrench is all that's needed.

◆ Rugged Construction

All wetted parts are made from super corrosion resistant 6063 aluminum alloy.

GENERAL SPECIFICATIONS

Heater Probe: Internal heater element provides 20 watts of heating power.

Power Consumption: Less than 800 mA at 100% Duty Cycle

Connection: Half inch NPT. Screws into standard top draw duplex fitting

Supply Voltage: 12 VAC. Transformer Included
